Related Article:

The authors of “A Smartphone App to Improve Medication Adherence in Patients With Type 2 Diabetes in Asia: Feasibility Randomized Controlled Trial” (JMIR Mhealth Uhealth 2019;7(9):e14914) noticed an error in the Results section of their published article. Under the “Adherence to Trial Participation” subsection of the Results section, the following sentence:

Eight participants had 100% adherence for the first 2 weeks of the intervention, which was decreased to 4% by the third week of the intervention.

Has been changed to:

Eight participants had 100% adherence for the first 2 weeks of the intervention, which was decreased to four participants by the third week of the intervention.

This change does not affect any of the data presented in the Results section of the paper.

The correction will appear in the online version of the paper on the JMIR website on April 29, 2020, together with the publication of this correction notice. Because this was made after submission to PubMed, PubMed Central, and other full-text repositories, the corrected article has also been resubmitted to those repositories.
